

MATERIAL LOADING SYSTEM

Compatible with all Press-Side DFS models

The Material Loading System includes: a stainless-steel material feed hopper (see diagram); 110v material loader with controls; and a vacuum motor with filter bag. All connections are 1.5" O.D.

HOW IT WORKS:

When a lack of material is sensed, it will signal the high velocity vacuum to draw material into the stainless steel hopper inlet. The vacuum draws the material loader flapper closed, pulling dust through the hopper screen and out through the vacuum outlet into a filter or holding bin. When the draw cycle is complete, the flapper opens, releasing the material into and through the loader throat.

Customer supplied 1.5" I.D. evacuation hose and material loading wand* will be required.

A portable cart is recommended (not included) to house the system.

* For best results, the material loading wand should have an air adjustment
